1 [Yucca mountain is not the needed solution to nuclear waste. I won't list the many reasons but ask that you now agree to extend the public comment period. Much that has such impact on many needs to be shared and examined by more people, for a longer period. Not to do so is to prevent the citizens of our democracy from being well informed about your proposal. In the past the US could chide other countries for their secrecy and deception. Please do not let us now include our own DOE for the same faults. Pamela Moffat, citizen, wife, mother and grandmother with long-term nuclear concerns]
